1. Introduction

Thank you for trying out Address XT®, a powerful replacement for the standard address book application. It offers handy new features while keeping user interface as close as possible to user interface of built-in address book. In addition, Address XT uses standard databases for 100% compatibility with your existing applications.
Address XT integrates with Manage XT by Handydev to allow easy modification of large groups of contacts.

1.1 Contents

The distribution archive contains following files:

AddressXT.prc	The Address XT program file
pnoJpegLib.prc	Image library, only for devices with contact photo support (see below).
AddressXT.pdf	User's manual in PDF format
Readme.txt	Installation and release notes

1.2 Technical requirements

Address XT requires PalmOS 4.0 or later. It takes up 282Kb of RAM on the device.

1.3 Installing Address XT

AddressXT.prc needs to be installed on your PalmOS ® - powered device to use the software. Usually this is done using Palm Install Tool. Please refer to the documentation that came with your handheld for instructions on how to use the Palm Install Tool.

If your device system software supports contact photos (that is, if your device is one of the following list: Palm Tx, Z22, Zire 72, Treo 650, Tungsten T3, Tungsten T5, Tungsten E, Tungsten E2, LifeDrive Mobile Manager), install pnoJpegLib.prc. On other devices, you do not need install this file.

On the first run Address XT will be configured using default settings optimized for your device. You can change settings later in Option screens. Additionally the application will ask you to map it to hardware button or Phone Favorites button (you can also change this setting later in the Button Options screen).

1.4 Mapping Address XT to hardware "Address Book" button

If your PalmOS device is equipped with hardware buttons, you can map the hardware "Address Book" button to start Address XT application. To do so, start Address XT and select "Button Options..." in the Options menu. Check or uncheck "Map to Hardware Button" checkbox to enable or disable key mapping to Address XT.

1.5 High-Resolution devices support notes

Address XT supports screen resolutions 160*160 and 320*320. Additionally,
it supports Sony Clie 320*480 and 480*320 screen resolutions and Palm or Tapwave Zodiac 320*480 and 480*320 screen resolutions.

1.6 Contacts application compatibility

Address XT is compatible with all the extended text fields of the Contacts application.

Address XT lets you view and edit all the extended fields offered by the Contacts application, except for the “Photo” field. You can view contact photos on devices that have Contacts application (Zire 72, Treo 650, Tungsten T3, Tungsten T5, Tungsten E, Tungsten E2, LifeDrive Mobile Manager). You cannot edit contact photos with current Address XT version. Use your desktop software or the Contacts application to assign photo to a contact. Future versions of Address XT will support photo editing in-house.
On devices that do not have photo support in the built-in Contacts application you will need to set contact photos using your desktop software (Palm Desktop, for example).

2. Application overview

Address XT resembles standard Address Book application in many ways. Here we will explain only the extended features of Address XT.

2.1 Enhanced Address List on high resolution – capable devices

Address XT® allows to effectively increase quantity of information visible in Address List by up to 100% or even more. This is done using high-resolution fonts on the devices which support Sony or Palm high-resolution modes. “Small fonts” mode can be enabled in Address List Options.

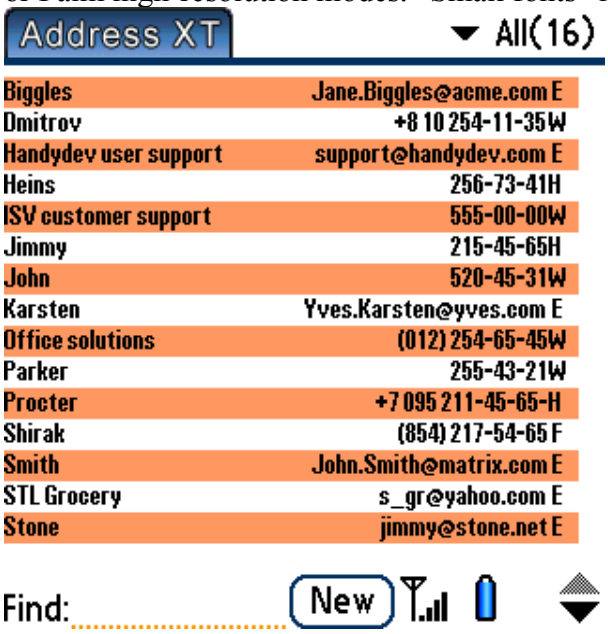

Fig 2.1.1 - Address List in "small fonts" mode

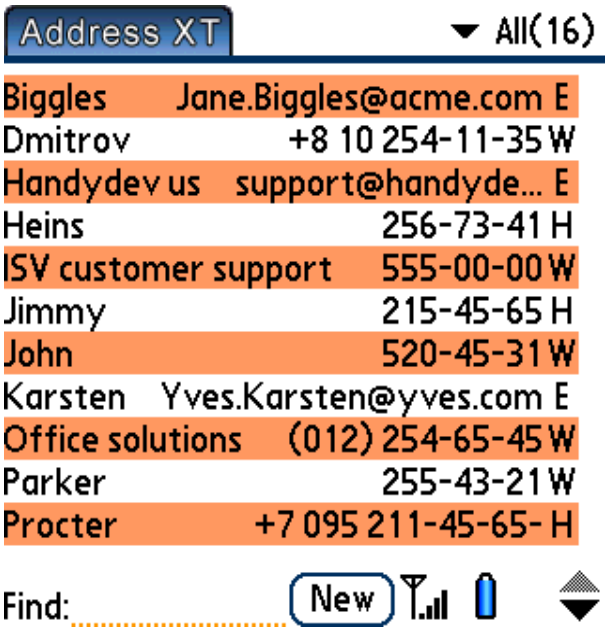

Fig. 2.1.2 – Address List in standard mode

2.2 New sorting options

Address XT introduces 4 new Address List sorting options, as can be seen on Fig. 2.2.1

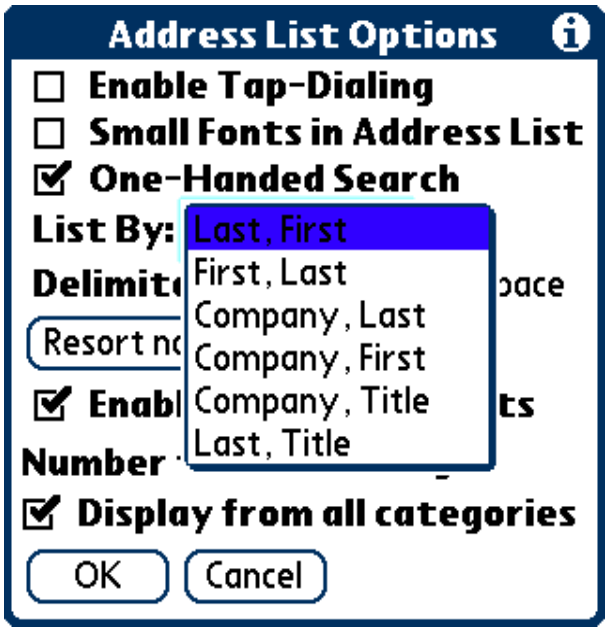

Fig. 2.2.1 – new sorting options in the Address List options screen

These options affect how the Address List will look like. For example, if you choose "Company, Title" sorting option, all the contacts will be sorted by company, and then by title. Also, these fields will be displayed in Address List view.

2.3 Purge category

Address XT features a Purge category menu command which can be accessed from Address List "Record" menu. It lets you quickly delete all records from current category.

Be careful using this option!

2.4 Enter company data

“Enter company data” command allows you to quickly set various fields for all the contacts working in a selected company.

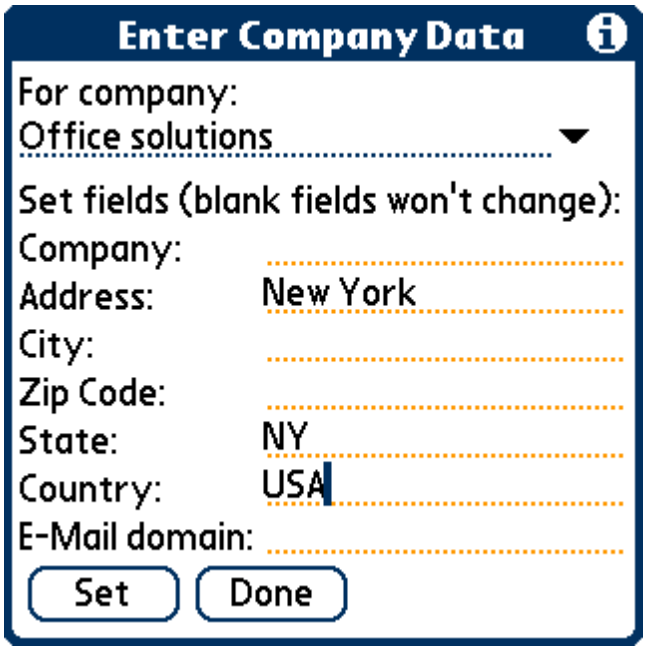

Fig. 2.4.1 – Enter Company Data screen

Suppose some company, where you have a couple of contacts, has just moved to another city or changed its e-mail domain. Instead of re-typing the same info for every contact, you just go to “Enter Company Data” screen, select a company that moved, and enter all the fields that have changed. Press the “Set” button – and all the contacts working in the company will be updated.

Enter Company Data screen can be accessed from Address List “Record” menu.

Note that entering a new e-mail domain changes only the part of e-mail address that's after the '@' sign. For example, setting the e-mail domain to “sw.ny.us.com” will change e-mail address “smith@wst.org” to “smith@sw.ny.us.com”

You can set up Address XT to replace only empty fields. This option is set from the Enter Company Data screen Options menu (“Preferences…” item).

2.5 Birthday reminder

Birthday reminder allows you to store birth date for any of address book entries and optionally set up reminders for birthdays.

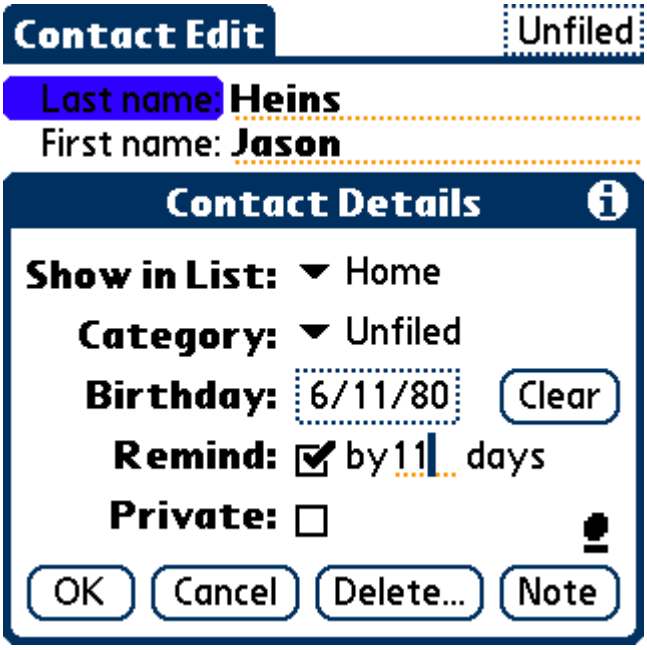

Figure 2.5.1 – Address Entry Details

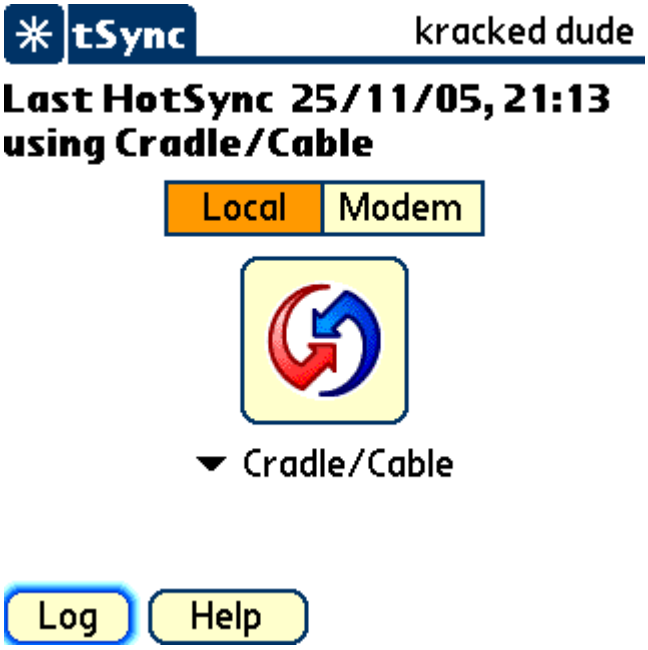

Figure 2.5.2 – Birthday reminder in HotSync

Birth date can be entered by tapping “Details...” button in the Address Edit screen. Here, you can set birth date by tapping date selector, remove birthday by tapping the 'Clear” button and set birthday reminder by checking the “Remind” checkbox and entering number of days to be reminded by.

Birthday reminder is visible in any application which has an standard PalmOS title bar (Fig. 2.5.2). When you tap on attention asterisk, the reminders screen pops up (Fig. 2.5.3).

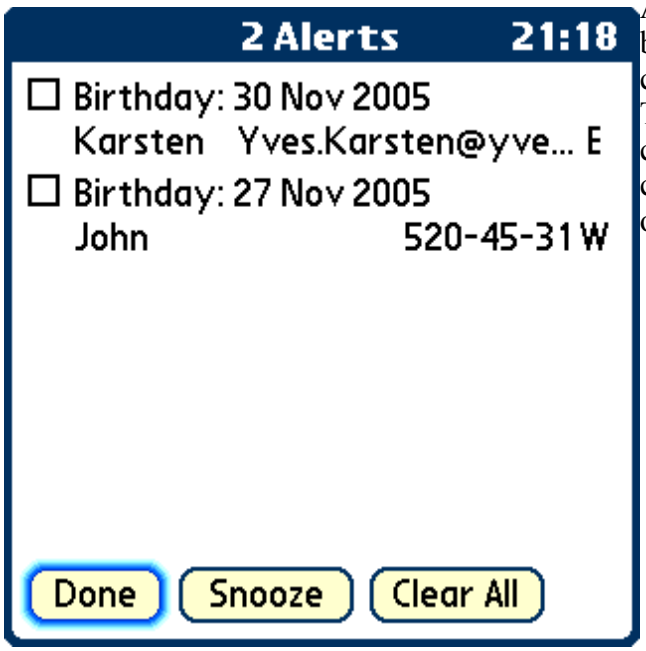

Figure 2.5.3 – Reminders screen

At this screen, you see a list of forthcoming birthdays with short information about the corresponding person.
To clear an reminder, check the corresponding checkbox. To open address book entry of the contact who's birthday is coming, just tap on his or her name.

Beaming feature of Address XT is extended to support the new “Birthday” field. This means that you can exchange contacts over IR or Bluetooth with birthday information with devices that support vCard standard and which have the “Birthday” field. If birthday is entered for a contact, it can be seen in Address View (Fig. 2.5.4).

Figure 2.5.4 – Address View with birthday information

Birthday information is stored in a separate database named “AddrXTDB2”. If you delete Address XT from your device, birthday information will be also deleted if your device comes without preinstalled Contacts application. If you choose to reinstall Address XT, you can restore birthday information by installing “AddrXTDB2.pdb” file which is backed up to your Palm Desktop user directory during each HotSync.

2.6 General options

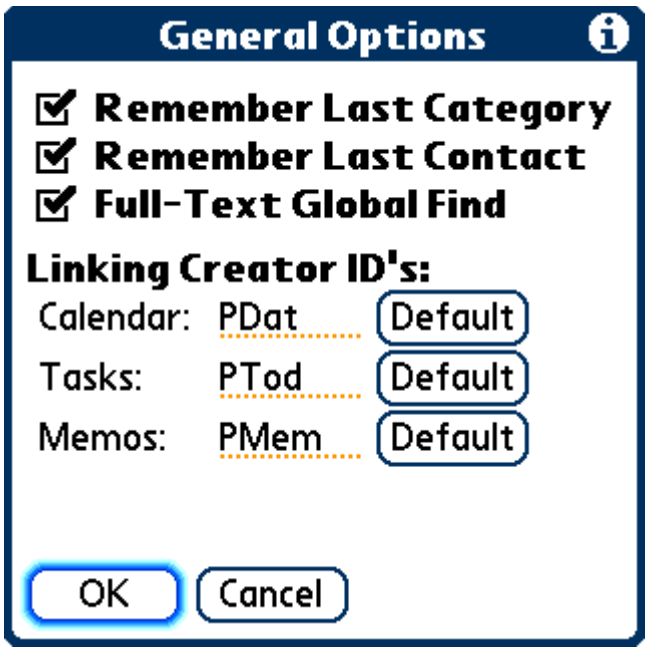

Figure 2.6.1 - General Options screen

When the “Remember Last Contact” option is set, Address XT will open the last contact if you exited Address XT while viewing it, or will scroll to that contact if you exited from Address List.

Here is an example of what Full-Text Global Find option does:

When searching for a string 'mit' (using the System Find), Address XT will always find records like “John Mitts” where one of the fields starts with the string you are searching for. However, if the Full-text search option is on, Address XT will also find entries like “Albert Gormitter” or “Alice Smith” where the search string can be located in any part of address fields.

Note that Global Find is always caseless.

The “One-Handed Search” option, when available, lets you turn off contact lookup by letter using 5-Way Navigator or 4-Way JogDial.

Linking options let you set up which applications will open contact links. To revert to a default application, tap the corresponding “Default” button.
To determine Creator ID for the application that should open links, use file-management utility like Filez. Note that third-party applications may not support opening a link from Address XT. If an application with a specified Creator ID can't be found, link will be opened using a default application for that link type.

2.7 Button options

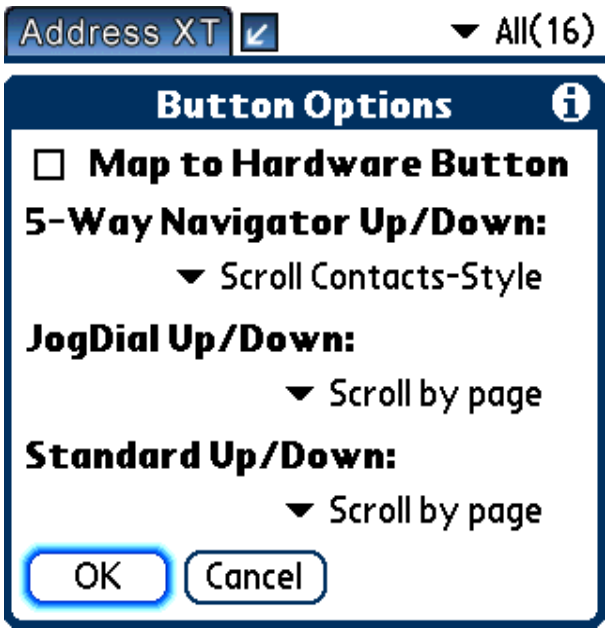

Fig. 2.7.1 – Button Options screen

Button options screen lets you set up the way various buttons function in the Address List screen. In the current version, you can set up the way JogDial, 5-Way Navigator and standard up/down buttons scroll the Address List.

Contacts-style scrolling for the 5-Way Navigator lets you switch betwen page and record scrolling using the 5-Way Navigator. Switch from page scrolling to record scrolling using the "Select" button, when the lookup field is empty. Switch from page scrolling to record scrolling using the "Left" button when the lookup field is empty. This mode is analogous to record scrolling in the Contacts application.

On Treo smartphones, “Map to Favorites” option is available instead of “Map to Hardware Button”. It sets Address XT to first Phone Favorites button. The application that was there previously is moved to first free button available.

2.8 Address List Options

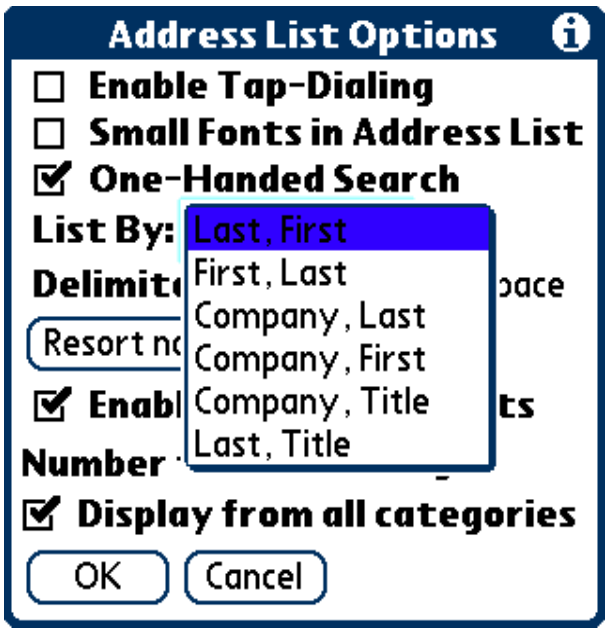

Fig 2.8.1 – Address List Options

Tap “Resort now” to force database resort using selected sort mode.

Address XT supports one-handed search in Address List using 5-Way Navigator. Press Right to add an letter to a search string, and press Left to remove one letter. Press Up and Down to change current letter. If multiple records satisfy the search criteria, press Up and Down to select between them. To enable one-hand search, select the “One-Handed Search” checkbox.

You can also select recent contacts options and choose database sorting mode from this screen. To select how record fields are delimited, select a corresponding option in the “Delimiter” list.

“Advanced Find” feature lets you find contacts using both displayed names. If this option is deselected, only first displayed name will be searched.

2.9 Send E-Mail To Contact

Address XT provides integration with any PalmOS Helper API – compatible e-mail application (including VersaMail and SnapperMail).

You can send e-mail to contact using such application from Address View or Address Edit screen, using Record menu.

Note that "Send E-Mail To Contact" menu item appears only if selected contact has one or more e-mail address and if you have compatible e-mail application installed. Once you tap "E-Mail To Contact", the Select E-Mail Address form appears (Fig. 2.9.2).

Fig. 2.9.1 – E-Mail Address Selection

Once you select an e-mail address and press OK, your e-mail application will show an e-mail compose form. Once you send the message, you will get back to Address XT.

If you e-mail account is not configured in your e-mail application, you will get an error message stating that e-mail application can not be started.

2.10 Color Options

Fig. 2.10.1 – Color Options screen.

You may set application colors using the Color Options. It is accessible from the Options menu in Address List, Contact and Contact Edit forms.

Set your custom text, background and selection colors in the Color Options or check “Use default system colors” to revert to the standard color scheme.

Check the “Color each other list row” checkbox to select color for each other Address List row.

If your device supports colors, you may select one of pre-defined color themes from a corresponding list.

2.11 Number of records in Category

Address XT displays number of records in current category. The number is displayed in the upper-right corner of the Address List.

2.12 Manage XT integration

Address XT integrates with Manage XT to allow you to easily modify large groups of records. If Manage XT is found in your handheld RAM, it can be started from the Record menu of the Contacts List screen.

2.13 Recent Contacts feature

The Recent Contacts feature allows you to view the list of recently opened contacts and easily access any recent record.

The Recent Contacts feature can be enabled or disabled by "Options – Address List Options…" menu of the contacts list screen. You may also select the number of stored recent contacts.

If you check "Always display all entries", you will access all recent contacts from any category. Otherwise, only recent contact entries which belong to current category will be displayed.

If "Always display all entries" checkbox in the Recent Options is selected, Note that recent contacts are shown for current category. To view all recent contacts, you should select the 'All" category first.

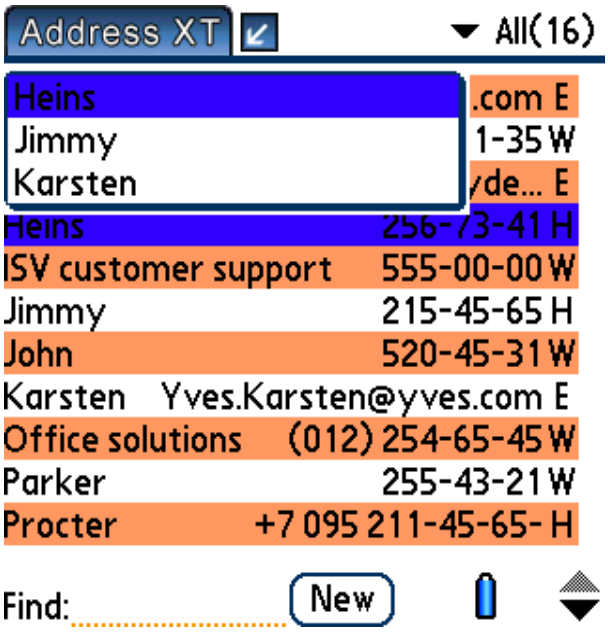

Fig. 2.13.1 – Address List with Recent Contacts

2.14 Birthday List

The "Birthday List" feature (Fig. 2.14.1) lets you view list of birthdays for any selected month. To use it, select "Birthday List" from the Record menu of Address XT's list of contacts. Tap on any record in Birthday List to open it.

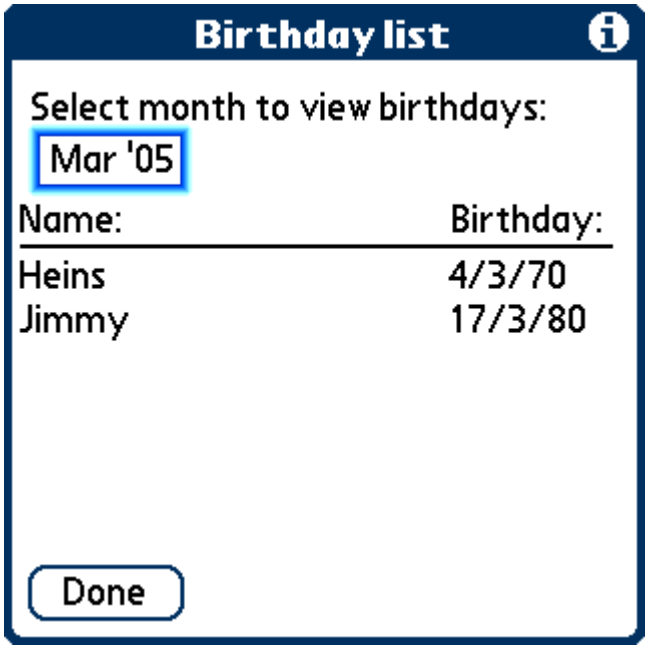

Fig. 2.14.1 – Birthday List

2.15 Contact Links

You can link any number of Tasks, Memos, Appointments or other Contacts to a contact.

To edit contact links, tap “Record” menu in the Edit View and select “Record Links” (Fig. 2.15.1)

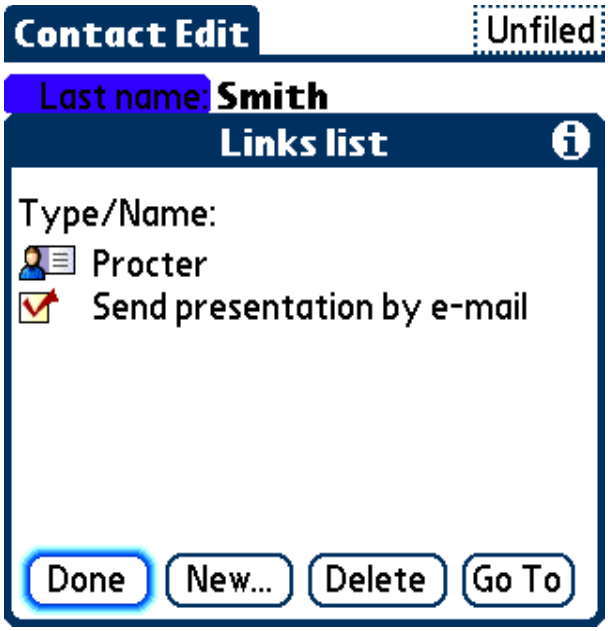

Fig. 2.15.1 – Links List

In the Links List, tap “New…” to add a link, tap “Delete” to delete a link and tap “Go To” to go to a link.

You can access record links easily in Address List and Address View by tapping a paperclip icon near its name (Fig. 2.15.2). Tap a link in the list to go to it.

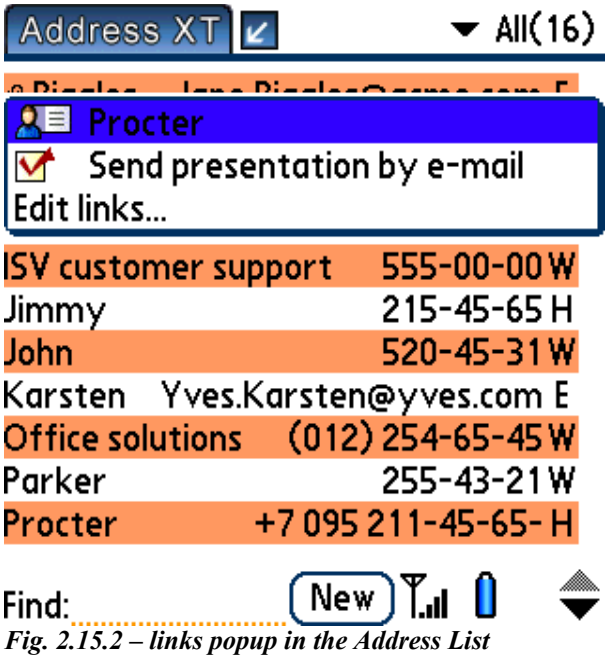

Fig. 2.15.2 – links popup in the Address List

Links information is stored in a separate database named “LinksDB2”. If you delete Address XT from your device, links information will be also deleted. If you choose to reinstall Address XT, you can restore links information by installing “LinksDB2.pdb” file which is backed up to your Palm Desktop user directory during each HotSync.

2.16 Contact Photos

Address XT features read-only support of contact photos on Zire 72, Treo 650, Tungsten T3, Tungsten T5, Tungsten E, Tungsten E2, LifeDrive Mobile Manager. Note that currently Address XT can only display already set contact photos, you can't edit or remove contact photo using Address XT (later Address XT versions will fully support contact photos).

You can set contact photo using Contacts application or desktop software on Zire 72, Treo 650, Tungsten T5, Tungsten E2, LifeDrive Mobile Manager. On Tungsten T3 and Tungsten E you can only set contact photo using your desktop software.

2.17 Mapopolis integration

You can open your contact's address on a map if you have Mapopolis application installed. To do so, open a contact in View or Edit mode, tap Record -> Contact Map and select an address that you want to open.

3. JogDial and 5-Way Navigator support

Address XT lets you take full advantage of JogDial and 5-Way Navigator. For information on whether you device includes one of those, please refer to your documentation.

3.1 JogDial behavior

In any dialog box except Font Selection, Security and Delete Record/Purge Category dialog pushing JogDial functions as tapping the “OK” or “Set” button, and JogDial Back button functions as tapping the “Cancel” or “Done” button.

In Address List, use the JogDial to scroll records in current category. Push the JogDial to go to the Address View screen for a selected record. Push the JogDial Back button to exit Address XT.

In Address View, use the JogDial to scroll records in current category. Push the JogDial to go to the Address Edit screen for a selected record. Push the JogDial back button to go back to Address List screen.

In Address Edit, use the JogDial to scroll record fields. Push the JogDial to go to the Address Entry Details dialog. Push the JogDial back button to go back to Address View screen.

3.2 5-Way Navigator behavior

In any dialog box except Font Selection and Security dialog pushing Select button functions as tapping the “OK” or “Set” button. On Treo 600, Treo 650, Tungsten T5 and LifeDrive handhelds, 5-Way Navigator functions in all dialogs in a standard way for this devices.

In Contacts List, use the 5-Way Navigator to scroll records in current category. Push the Select button to go to the Contact View View screen for a selected record.

In Contact View, use the 5-Way Navigator to scroll records in current category. Push the Select button to go to the Contact Edit screen for a selected record. Push the Left button to return to contacts list. Push the Right button to dial selected contact.

In Contact Edit, use the 5-Way Navigator to scroll record fields. Push the Select button to go back to the Contacts List.

4. Registering Address XT

Address XT is free to try for 30 days without any nag screens. After this time period ends, you will not be able to run Address XT without registering your copy. During trial period, you may open the About Screen to see how many trial days you have left.

To register Address XT, write down your HotSync name which is mentioned in the About Screen of Address XT and complete purchase on the web site where you've downloaded Address XT, or on the web site mentioned in the Readme.txt file included with this distribution.

When asked for your HotSync name, enter it correctly. HotSync name entry is case-sensitive! Shortly after you payment is processed, you will receive e-mail letter with registration confirmation. Then, you should open the Address XT About Screen again, tap "Register" and enter your registration code.

If you've correctly entered your Serial Number, the About screen, when opened again, will not mention that this application version is not registered, and you will be able to use Address XT for any time period.

5. Troubleshooting

5.1 Birthday reminder screen looks garbled on Sony Clié® device.

The chances are that you're using SwitchDash® application. If you do so, upgrade to the latest version of SwitchDash®.

5.2 JogDial doesn't work as expected on Sony Clié® device.

The chances are that you have JogAssist enabled for Address XT. To disable it, go to Prefs application. Select Jog panel, then tap “Select Applications”. Check “Address XT” application.

6. Change Log

22 March, 2004 – Address XT version 1.0 released.
25 March, 2004 – Address XT version 1.02 released.
Fixed Fatal Alert on pushing the JogDial/5-Way Navigator when no record is selected.
Fixed rare wrong JogDial/5-Way Navigator behavior.
28 March, 2004 – Address XT version 1.03 released.
Fixed sorting screw-up after using the standard Address Book.
30 March, 2004 – Address XT version 1.04 released.
Fixed registration problems.
1 April, 2004 – Address XT version 1.05 released.
Added support for Sony Clie 320*480 and 480*320 screen resolution.
Added JogDial/5-Way Navigator support in Notes screen.
Fixed minor bug in Enter Company Data screen.
3 April, 2004 – Address XT version 1.06 released.
Fixed font selection in Address Edit screen.
Fixed screen resizing on Sony Clie devices in Address Edit screen.
6 April, 2004 – Address XT version 1.07 released.
Added button options in the Address List screen.
14 April, 2004 – Address XT version 1.08 released.
Added birthday field compatibility with Contacts application (Tungsten E/T3).
15 April, 2004 – Address XT version 1.09 released.
Added one-hand search using 5-Way Navigator.
17 May, 2004 – Address XT version 1.10 released.
Added 320*480 and 320*480 screen resolution support for PalmOne/Tapwave Zodiac devices.
Fixed compatibility issues with Contacts application.
Fixed minor screen issues on high-resolution Sony Clie devices.
21 May, 2004 – Address XT version 1.11 released.
Added color "note" icon.
Fixed switching to small fonts in address list bug.
Fixed PalmOS 5.0 High-Density display support bugs.
24 May, 2004 – Address XT version 1.12 released.
Added “E-Mail To Contact” feature.
2 June, 2004 – Address XT version 1.13 released.
Added compatibility with Treo 600 5-Way Navigator.
6 June, 2004 – Address XT version 1.14 released.
Added Quick Dial button in Contact View.
UI improvements.
7 June, 2004 – Address XT version 1.15 released.
Improved Graffity 2 compatibility in address lookup.
15 June, 2004 – Address XT version 1.16 released.
Improved Zire 72 Contacts application support.
18 June, 2004 – Address XT version 1.17 released.
Fixed startup problems with empty address book on PalmOS 5 devices.
24 June, 2004 – Address XT version 1.18 released.
Fixed fatal alert on setting birthday field with Contacts application installed.
26 June, 2004 – Address XT version 1.19 released.
Added Contacts-style scrolling mode for 5-Way Navigator.
5 July, 2004 – Address XT version 1.20 released.
Added Color Settings.
Fixed small bugs in Enter Company Data and in Note screens.
6 July, 2004 – Address XT version 1.20a released.
Fixed fatal alert on soft-reset.
8 July, 2004 – Address XT version 1.20b released.
Fixed birthday reminders.
9 July, 2004 – Address XT version 1.21 released.
Allowed to set any available font in “Small fonts” mode.
13 July, 2004 – Address XT version 1.22 released.
Added “Remember Last Contact” option.
19 July, 2004 – Address XT version 1.23 released.
Enhanced Color Options.
Fixed search bug.
21 July, 2004 – Address XT version 1.24a released.
Improved “Each other row” coloring.
Added display of number of records in category.
Miscellaneous bugfixes.
24 July, 2004 – Address XT version 1.24b released.
Color setting bugs fixed.
2 August, 2004 – Address XT version 1.25 released.
Added Manage XT integration.
Small bugfixes.
10 August, 2004 – Address XT version 1.26 released.
Fixed issue with return key.
Fixed birthday notifications for deleted records.
Fixed one-handed search issues.
27 October, 2004 – Address XT version 1.3 released.
Added Recent Contacts feature.
29 October, 2004 – Address XT version 1.3a released.
Fixed problems using Recent Contact.
4 November, 2004 – Address XT version 1.31 released.

Enhanced Recent Contacts options.
11 November, 2004 – Address XT version 1.32 released.
Improved Dial Number user interface.
Reduced screen flicker on 320x480 resolution screens.
Small bugfixes.
21 November, 2004 – Address XT version 1.32a released.
Fixed fatal alert on low-resolution devices.
Fixed Contacts-style scrolling bug.
2 December, 2004 – Address XT version 1.32b released.
Fixed color settings bug on grayscale devices.
11 December, 2004 – Address XT version 1.32c released.
Fixed locks on devices with dynamic input area.
UI improvements and fixes.
19 December, 2004 – Address XT version 1.33 released.
Birthday list feature added.
14 January, 2005 – Address XT version 1.35 released.
Enhanced Contacts application compatibility.
Minor bugfixes.
17 January, 2005 – Address XT version 1.36 released.
Improved one-handed search using 5-way navigator.
Fixed DIA issues.
20 January, 2005 – Address XT version 1.37 released.
Fixed "Clear Birthday date/reminder" bug.
Visual improvements.
27 February, 2005 – Address XT version 1.38 released.
Fixed DIA bugs on sending/beaming records.
Fixed color settings bugs.
Fixed record editing bugs on some devices.
Introduced trial 30-day period instead of nag screens.
23 March, 2005 – Address XT version 1.39 released.
Improved Tungsten C/W support.
Improved Treo support.
Performance improvement on large databases.
Bugfixes.
1 April, 2005 – Address XT version 1.39a released.
Further performance improvement.
Enhanced Company Data feature.
Added in-application help.
16 April, 2005 – Address XT version 1.40 released.
Added contact links feature.
Bugfixes.
17 April, 2005 – Address XT version 1.40a released.
Improved contact links feature.
Bugfixes.
21 April, 2005 – Address XT version 1.40b released.
Improved JogDial/5-Way Navigator support.
Bugfixes.
24 April, 2005 – Address XT version 1.40d released.
Improved compatibility with Tungsten E2 and Treo 650 SPRINT with 1.08 update.
Bugfixes.
25 April, 2005 – Address XT version 1.41 released.
Added ability to link with appointments.
Bugfixes.
4 May, 2005 – Address XT version 1.42 released.
Improved Treo 650 hardware buttons handling.
Improved one-handed search with 5-way navigator.
Fixed birthday import from Contacts.
Fixed record edit scrolling on some devices.
22 May, 2005 – Address XT version 1.43 released.
Fixed compatibility issues with Treo 650 (all versions) and Tungsten T5.
Minor bugfixes.
14 June, 2005 – Address XT version 1.44 released.
Added full keyboard navigation support for Treo 600, 650, Tungsten T5 and LifeDrive.
Fixed some NVFS-related bugs.
23 June, 2005 – Address XT version 1.45b released.
Added ability to send Messages to contact on Treo smartphones.
Bugfixes.
5 July, 2005 – Address XT version 1.45c released.
Fixed screen refresh on Clie devices.
Fixed issues with contact links.
Improved registration UI.
14 July, 2005 – Address XT version 1.46 released.
Improved one-handed search.
Fixed PalmOS 4.0 issues.
Reduced startup time.
12 August, 2005 – Address XT version 1.47 released.
Greatly improved one-handed search.
Improved Contact Lookup.
Bugfixes.

6 September, 2005 – Address XT version 1.50 released.
Added photo support on Zire 72, Treo 650, Tungsten T3, Tungsten T5, Tungsten E, Tungsten E2, LifeDrive Mobile Manager devices.
Added option to turn off One-Handed search.
Added Birthday List sorting.
Performance improvements.
UI improvements.
Bugfixes.
8 September, 2005 – Address XT version 1.50b released.
Improved One-Handed Search speed.
Fixed record beaming/sending problems.
Fixed category beaming/sending problems.
Fixed purge category issue.
18 September, 2005 – Address XT version 1.50c released.
Fixed linking issues on some devices.
Fixed Enter Company Data not working on some devices.
Minor UI improvements.
Improved Dial List dialog on Treo.
Fixed Dial List contact name format.
Fixed Recent Contacts issues.
Removed screen flicker on links edit in Contact View.
19 September, 2005 – Address XT version 1.50d released.
Fixed birthday alert issues.
Fixed startup issues on some devices.
1 October, 2005 – Address XT version 1.50e released.
Improved Five-Way Navigation Support.
Improved Contact Edit text case auto-selection.
Fixed compatibility issues with 3rd-party dialers on Treo smartphones.
4 October, 2005 – Address XT version 1.50f released.
Fixed Tap-Dialing not working on some devices.
Fixed SMS not available on Treo.
Minor UI improvements.
17 October, 2005 – Address XT version 1.51 released.
Added Color Themes.
Fixed problems with empty database on NVFS devices.
Fixed Color Options bugs.
Fixed Treo-related Dial dialog bug.
Added Z22 compatibility.
7 November, 2005 – Address XT version 1.52 released.
Added scrolling with Option button on Treo smartphones.
Updated with latest pnoJpegLib library version.
Fixed navigation behavior in “New Link” form.
Fixed button options on Treo 600.
Fixed 5-Way Navigator scrolling problems in Contacts List.
Fixed IM type selection bug.
Fixed Autumn color Theme.
Fixed category selection bug in Contacts Edit screen on some devices.
Fixed bug deleting a record with links.
Fixed reset while linking 2 appointments to a contact.
Fixed memory leak while linking appointment.
New application icons.
20 November, 2005 – Address XT version 1.52a released.
Improved start-up speed on devices with Contacts application pre-installed.
25 November, 2005 – Address XT version 1.53 released.
Added resort ability.
Improved options UI.
Fixed fatal alert on startup on some devices.
15 December, 2005 – Address XT version 1.54 released.
Added linking options.
Improved DIA support.
Fixed custom fields rename bug on some devices.
7 January, 2006 – Address XT version 1.55 released.
Added Mapopolis integration.
Added SMS support on some Palm devices.
Added delimiter setting in Address List Options.
Fixed contact creation bug on DIA devices.
Fixed accented characters entry in lookup field.
Fixed linking bugs.
Fixed dialing bugs.
12 January, 2006 – Address XT version 1.55a released.
Fixed menu bug in Contact View and Contact Edit screens.
15 January, 2006 – Address XT version 1.56 released.
Contact links are 2-way now.

7. End User License Agreement (EULA)

This End User License Agreement is a legal agreement between you and Handydev Software for the "Address XT" application. This application includes computer software ("SOFTWARE"), as well as any accompanying documentation ("DOCUMENTATION"). By installing and running the SOFTWARE, you agree to be bound by the terms of this License Agreement. If you do not agree to the terms of this agreement, you may not use the SOFTWARE.

FREE TRIAL

Handydev Software grants you a non-exclusive license to use the SOFTWARE free of charge for 30 days, counting from first time you run the SOFTWARE, for the purpose of evaluating whether to purchase an ongoing license to use the SOFTWARE. After this time period you will not be able to run the SOFTWARE. When you purchase the software and enter the Serial Number that you received after purchase, you won't any longer be reminded to purchase the software.

GRANT of LICENSE

Subject to the payment of applicable license fees, Handydev Software grants to you a non-exclusive license to use the SOFTWARE under the following conditions:

a) You may install and use only one copy of the SOFTWARE at any given time.

b) You may not reverse engineer, decompile, or disassemble the SOFTWARE.

c) You may not modify or redistribute the SOFTWARE.

d) Handydev Software may terminate this agreement if you fail to comply with the terms and conditions therein. In such event, you must delete all copies of the SOFTWARE and DOCUMENTATION.

COPYRIGHT

The SOFTWARE is protected by copyright laws, and international copyright treaties, as well as other intellectual property laws and treaties. All title and copyrights in and to the SOFTWARE and DOCUMENTATION are owned by Handydev Software.

LIMITED WARRANTY

The SOFTWARE and DOCUMENTATION are sold "AS IS", without warranty as to their performance, merchantability, or fitness for any particular purpose. The entire risk as to the results and performance of this program is assumed by you.

In no event shall Handydev Software be liable for any damages whatsoever arising out of the use of or inability to use the SOFTWARE or DOCUMENTATION.

8. Copyright notices

All mentioned trademarks are properties of their respective owners.
