

FaceChat for Palm OS®

Version 1.2

Preface

FaceChat is a funny application for Palm OS® to chat with other Palm Powered Handheld. You can send a message with expression on a face in trick via **IrDA** or **Bluetooth**.

You can select by menu but also use Bluetooth by pressing Down scroll button, IrDA by Up scroll button, and change the expression of face by draggin mouth and eyeblow.

Requirement

FaceChat works on **Palm OS 5.0** as well as **Palm OS 3.5 or later**, such as Palm m130, m5xx, Tungsten T, Sony Clie PEG-N6x0, T6xx, NR70, NX70V and so on. Supported graphic modes are normal 160x160 and 320x320 color of Palm OS 5, but not Sony's Palm OS 4's resolutions.

Download

The latest version of **FaceChat** is **1.2**.

Our latest version and beta testing programs should be posted in **FocV Project** and **Palm Gear**.

In addition, the sources of version 1.1 for CodeWarrior R8 on MS Windows are contained in supplementary CD-ROM, of which "*Palm OS Programing*"(ISBN: 4-87783-044-8 C3004) has been published June 2002 by Cutt System, Inc,. But these resources above are descrided in Japanese.

FaceChat is a mailware. If you like this program and continue to use, please send an e-mail to **FocV Project**. Of course any comments and questions are granted.

WE TAKE NO RESPONSIBILITY FOR ANY LOSS OF DATA OR FAILURES. YOU ASSUME FULL RESPONSIBILITY FOR THE USE OF THIS PROGRAM.
